

BUGGY McFLY EXPLAINS: MALAISE TRAPS

Malaise traps are specialized tents that capture bugs!

Here's how they work...

Bugs collide with the trap's mesh as they fly through the air.

The bugs then fly upwards and try to escape...

... But instead they're guided into the traphead where they fall into the collection bottle.

Each week, the collection bottle is changed and a new one is attached to capture more bugs.

A single bottle collects hundreds of bugs in just a week!
